

SSL Modification for AspCart 4.5

If your secure site is on the same server as your regular site, then follow the simple instructions below. If your secure site is on a different server, contact support@aspcart.com for additional information.

- 1) Place payment.asp, cardstrip.gif, mailto.exe, thankyou.asp in a secure directory
- 2) Open the "confirm.asp" in a text editor such as Microsoft WordPad

- 3) Modify the line

```
<form METHOD="post" ACTION="payment.asp">
```

Change it to

```
<form METHOD="post" ACTION="https://secureserver.com/site/payment.asp">
```

An example would look like this

```
<form METHOD="post" ACTION="https://secure.gcis.net/keith/payment.asp">
```

- 4) Save those changes
- 5) Open thankyou.asp in WordPad and change the link to the full URL of your main page i.e. <http://www.mysite.com/index.htm>
- 6) Save those changes
- 7) Depending on your configuration, it may also be necessary to modify the database connection string so that it points to aspcart5.mdb. You can ask your ISP for the full path to the aspcart5.mdb if you wish i.e.
D:\webs\username\aspcart\aspcart5.mdb
- 8) If you have done everything correctly, it will work. If not recheck each step. You can also e-mail support@aspcart.com if you are unable to resolve any technical issues.
